

CodeCentral™

life  
the linux company

*CodeCentral offers industry-leading innovation at an affordable price. It allows your development team to concentrate more on its work, increases productivity by its code reuse, bug tracking and helpdesk functionality and provides a gigantic library of project code ready to speed up your development process. CodeCentral is built on the very same technology powering sourceforge.net and savannah.gnu.org. CodeCentral brings your commercial software development the advantages OpenSource developers are experiencing for years.*

### Key Features

- Advanced Code Management
- Activity Monitoring and Statistics Reporting.
- 500 integrated Example Projects of which code can be used for your commercial software development
- Bug Tracking, File and Module archival, Patch Management, Task Management,
- Secure Source Control
- Document Management
- Increased developer satisfaction and productivity
- Helpdesk functionality
- Developer Management
- Optional Support Contract 24x7
- Optional Remote Maintenance Service

### Multiplatform Web based system

CodeCentral's functionality is entirely webbased, delivering you the power of a unified multiplatform environment with an extreme degree of proven scalability.

### Linux Based

CodeCentral is entirely based on the Linux operating environment, delivering an unsurpassed level of network performance, compatibility and availability - at a very affordable price. While our included services deliver the system completely up and running, customized for your environment, the system maintenance is webbased.

### Full delivery

Our price includes requirement assessment for the server hardware, the onsite installation and site-specific configurations and customizations (as far as foreseen by the service level), system maintenance, handover,

user training, software upgrades, support agreement with an optional 24 by 7 maintenance agreement and an optional remote maintenance service.

### Code Snippets

CodeCentral's project repository contains a library of 500 projects who are ready to be integrated into your commercial software development, drastically speeding up your development cycle.

### Code Management

Our Code Management features include Secure Source Version Control, Bug Tracking, File and Module Archival, Patch Management and internet access to the system through secure tunneled services (using 128 bit SSL and SSH)

### Developer Management

SourceMachine's Developer Management capabilities include the following features: Developer

access control, task and project management, support, activity monitoring and automated email updates.

### Knowledge Management

Advanced Document management features are combined with discussion forums and mailing lists with searching capabilities.

### Optional Remote Maintenance

It's possible to relieve your company entirely of the entire maintenance service. Our specialists monitor your installation and guarantee the service level you require.

### Data Security and Availability

We provide an integration service into your existing backup infrastructure. Through the setup of an hardware cluster, data availability can be guaranteed and an unseen Service Level can be expected.
