ERP Solutions

ERP (Enterprise Resource Planning) solutions are effective at streamlining business processes that cut across the functional areas of your business. ERP brings together fragmented operations, often replacing a multiplicity of legacy systems. By sharing common information across an integrated set of application modules, ERP speeds up transactions that cross your business. Increase productivity and efficiency of your administration with labor saving features such as Order Management, Invoice Management and Budget Management. **D.E.A.**'s pure internet architecture means that the right data is available to the right person in the enterprise anytime, anywhere from any web browser.

Order Management

Generate Orders with registered Suppliers and Catalog items with an easy to use and flexible user interface. Orders are generated on the fly and output is generated in standard HTML and PDF format. After an order is processed and delivered a mail is sent to the requested user stating his items have arrived.

Invoice Management

Gain multicurrency capabilities and realtime currency conversion through OandaTM technology. You can calculate and prorate numerous tax values including recoverable and non-recoverable VAT. Handle full or partial order deliveries and keep track of invoice and delivery status.

Budget Management

You will have access to mission-critical capabilities that allow you to leverage enterprise data to generate actionable information and provide audience-relevant reporting, streamline budget preparation, controlled spending and management reporting.

Our D.E.A. Software is the most flexible, scalable and adaptable Order Management System on the market today. Our main focus is to provide businesses with advanced ways of interaction in a secure web-based environment. Our commitment is to provide the market with the best available solution in an Open Source business model.

Services:

Key features of the DEA software allow interaction with other ERP environments, also by providing XML support. The DEA software is available for download free of charge, we offer the following Professional Services:

- Installation Services
- Custom development to add the features your company needs
- Implementation of specific Business Rules
- Remote Monitoring (Optional)
- Phone and Internet support (Up to 24x7)
- D.E.A. Courses (<http://edu.life.be>)

Application Architecture:

D.E.A. is a web-application used for handling the administrative needs of larger businesses. It's build upon a Sybase[™] or MySQL database and is completely webbased through the extensive use of PHP-scripts. The programming approach is of a modular kind. This means that enhancements and further features can be integrated rather quickly because the rest of the code doesn't need to change. Network security is guaranteed through the use of 128 Bit SSL-Encryption Layers, the standard for e-commerce transactions.

More details and additional news can be found on our dea-website <http://dea.life.be>

***"An effective IT-infrastructure supports a business vision and strategy.
D.E.A. is there to support your infrastructure deployment and efficiency."***

Technical specifications:

Multi-User	This application is a webinterface which has the advance that multiple users have immediate access to the data they require. Any changes in the data, made by one user, will be immediately visible for other users.
Modular	The programming approach is of a modular kind. This means that enhancements and further features can be integrated rather quickly because the rest of the code doesn't need to change.
Multi-Platform	The database runs on a Sybase ^(TM) or MySQL database(which is available for all major platforms). With a Netscape browser, you can interact with the database.
Advanced Interaction and Look&Feel	Through the use of automatic generated javascript code, users experience an enriched user interface and look-n-feel that's consistent across the entire application.
User Friendly	Because of the familiar look of the browser, the user will soon feel comfortable using the program.
Secure	Every user interaction is double checked for errors. All changes to the database are first printed to the user's terminal to be sure everything is correct. Everyone has to log in with a username and a password, only authorized personnel can modify the contents of the database and the administrator can easily see who has changed the data. Network security is guaranteed through the use of 128 Bit SSL-Encryption Layers, the standard for e-commerce transactions.
Scalability	All of D.E.A.'s core technologies are superscalable and typically used for large-scale webinfrastructure use.
